

---

on the standard UAC prompt Click on Finish Now you can exit the program. Now exit the program Double-click on GerbTool\_Main.exe Click on Use Existing Folder Now click on Browse All Files Select the encrypted files you want to decrypt Click on Open Click on OK If it starts to decrypt the files, leave the program running as we're going to run the program again later. Now GerbTool\_Main.exe is doing some work, if you want to see what's going on, you can always close the program and come back later. Wait for a while Double-click on GerbTool\_Main.exe Click on Use Existing Folder Select all the files you want and click OK. It may take some time depending on how many files you selected, but it should do the job. When it is done, open your CMD window and type: rar x -vu GerbTool\_Main\_2016\_07\_16.rar This will un-zip the rar file into your main folder. Now exit the program. Exit the program Double-click on GerbTool\_Main.exe Click on Use Existing Folder Select all the files you want and click OK It may take some time depending on how many files you selected, but it should do the job. When it is done, open your CMD window and type: rar f30f4ceada
