Statistics tracking (in Visual LISP or Visual Basic) COM automation (VB or C++, for example to automate software with C++ code, such as third-party CAD software or COM software). Application programming interfaces for C, C++, Visual Basic, and ObjectARX. These allow customization and automation of AutoCAD. The Virtual Reference Library (VRL) also provides a collection of drawing templates, and also allows customization of the drawing environment to fit a developer's workflow. Application Programming Interfaces (APIs) Application programming interfaces (APIs) provide the developer with low-level access to AutoCAD's functions. The Microsoft Visual C# and Visual Basic.NET API support AutoCAD's API. There is also a C++ API to access the functions. The ObjectARX API includes several classes for making AutoCAD drawing objects available to other applications. Virtual Reference Library The Virtual Reference Library (VRL) allows developers to use existing objects to build their own objects, without modifying the original source code. The library of generic objects is organized into a "VRL library", and developers can use them to build their own user interface (such as dialog boxes) and custom functions. Each standard component and customization point in AutoCAD includes a VRL object. ObjectARX ObjectARX is a class library that provides tools for creating, modifying, and reading AutoCAD data types. ObjectARX provides type-safe access to data types in AutoCAD. ObjectARX classes allow for the following: Access to drawings Access to blocks Access to text and image objects Access to components, blocks, and shapes Access to associative arrays and reports Access to and from the object cache Access to form fields Access to custom and built-in metadata Access to object definition points (for data type definitions) Access to custom and built-in data types Visual LISP Visual LISP is a LISP dialect based on the ANSI Common Lisp standard. The Visual LISP API, which runs on Visual Studio (including Visual Basic and C#), allows the developer to interact directly with objects in AutoCAD. Visual LISP was first introduced in AutoCAD 2011.
